

## **Firwin Corp Announces UL 2200 Certification.**

Firwin Corp reached another major milestone recently, obtaining UL 2200 certification for Stationary Engine and Generator Assemblies.

"Some of our customers who are generator builders have been coming under increasing pressure to be UL compliant", said Paul Herman, Firwin's president. "Although we have always held ourselves to high quality standards, it wasn't until recently that we began getting requests from customers as to whether our blankets were UL compliant."

The UL certification applies to Firwin's standard insulation blankets, with either FW1200 or FW1800 insulation. The UL 2200 standard is geared specifically to stationary engine generator assemblies. The purpose of the standard is to ensure that generators have been designed and built to guard against risk of fire, electric shock, and injury to personnel.
